

Educore: A Centralized School Organization Management System for Fee

Tracking and Real-Time Notification

Designed for Tertiary Institutions

Part 1. Respondents Profile

Name: _____ Date: _____

Age: _____ Gender: _____ Civil Status: _____

Address: _____

Type of Respondent: _____

Part 2. User Experience Survey

Evaluation: Please rate the level by putting a check mark (/) on the column that corresponds to your assessment. Use the scale below.

Numeric Value Equivalent Rating

5 - Very Strongly Agree

4 - Strongly Agree

3 - Agree

2 - Disagree

1 - Strongly Disagree

Category	Description	5	4	3	2	1
Functional Suitability	Functional Completeness. The system covers all the specified tasks and user objectives.					
	Functional Correctness. The system provides the correct results with the needed degree of precision.					
	Functional Appropriateness. The system facilitates the accomplishment of specified tasks and objectives.					
Performance Efficiency	Time Behavior. The system's response and processing times and throughput rates when performing its functions, meet requirements.					

	Resource Utilization. The system's amounts and types of resources used when performing its functions, meet requirements.					
	Capacity. The system's maximum limits of parameters meet requirements.					
Compatibility	Co-existence. The system can perform its required functions efficiently while sharing a common environment and resources with other products, without detrimental impact on any other product.					
Usability	Appropriateness Recognizability. The system allows users to recognize if it is appropriate for their needs.					
	Learnability. The system can be used by specified users to achieve specific goals of learning to use the application with effectiveness, efficiency, freedom from risk and satisfaction in a specified context of use.					
	Operability. The system has attributes that make it easy to operate and control.					
	User Error Protection. The system protects users against making errors.					
	User Interaction Aesthetics. The system's user interface enables pleasing and satisfying interaction for the user.					
	Accessibility. The system can be used by people with the widest range of characteristics and capabilities to achieve a specified goal in a specified context of use.					
Reliability	Maturity. The system meets the needs for reliability under normal operation.					
	Availability. The system is operational and accessible when required for use.					
	Fault Tolerance. The system operates as intended despite the presence of hardware or software faults.					
	Recoverability. The system can recover the data directly affected and re-establish the desired state.					
Security	Confidentiality. The system ensures that data are accessible only to those authorized to have access.					

	Integrity. The system prevents unauthorized access to, or modification of, computer programs or data.					
	Non-repudiation. The system can be proven to have taken place, so that the events or actions cannot be repudiated later.					
Maintainability	Reusability. The system can be used in more than one system, or building other assets.					
	Testability. Tests can be performed in order to determine if the system meets the criteria.					
Portability	Adaptability. The system can effectively and efficiently adapt to different hardware/software or other usage environments.					
	Installability. The system can be successfully installed/uninstalled in a specified environment.
